

Project Demonstration

PocketSmart AI – Your Smart Budget & Recommendation Assistant

1. Demonstration Objective

The demonstration showcases the complete working flow of PocketSmart AI from user authentication to personalized AI-generated recommendations.

2. Demonstration Flow

```
graph TD; A[Application Launch] --> B[Home Page]; B --> C[Register / Login]; C --> D[User Dashboard]; D --> E[Select Planner]; E --> F[Enter Budget & Requirements]; F --> G[Submit]; G --> H[AI Processing]; H --> I[Recommendations]; I --> J[View Details]; J --> K[Recommendation History];
```

3. Demo – Home Interior Planner

Step 1

Open the PocketSmart AI application.

Step 2

Log in to the user account.

Step 3

Select:

Home Interior Planner

Step 4

Enter:

- Total budget
- Room type
- Required products
- Quantity
- Style preferences

Step 5

Submit the form.

Step 6

The FastAPI backend processes the request and sends the relevant information to Gemini AI.

Step 7

The system displays AI-generated home interior recommendations.

Example categories:

- Furniture
- Lighting
- Decoration
- Dining products
- Other interior items

4. Demo – Party Planner

Step 1

Select:

Party Budget Planner

Step 2

Enter:

- Total budget
- Number of guests
- Event type
- Venue requirements

Step 3

Submit the request.

Step 4

Gemini AI processes the requirements.

Step 5

The system displays recommendations for:

- Food
 - Venue
 - Decoration
 - Entertainment
 - Accommodation where applicable
-

5. Demo – Jewelry Planner

Step 1

Select:

Jewelry Budget Planner

Step 2

Enter:

- Budget
- Occasion
- Style preference

Step 3

Optionally upload an outfit image.

Step 4

Submit the request.

Step 5

Gemini AI processes the text and image information.

Step 6

The system displays personalized jewelry recommendations.

6. Demo – Authentication

The demonstration should also show:

```
Register
  ↓
Login
  ↓
Dashboard
  ↓
Logout
```

This demonstrates the authentication and session-management functionality.

7. Demo – Recommendation History

After generating recommendations, the user can access the history section.

The history page displays previous recommendation queries and results for review and reuse.

8. Key Features to Highlight During Demonstration

During the project presentation, highlight:

☐ **AI Integration**

Gemini 1.5 Flash Pro is used to process user requirements and generate recommendations.

Budget Awareness

Recommendations are generated according to the user's specified budget.

Multiple Planning Categories

The system supports Home, Party and Jewelry planning.

Multimodal Input

The Jewelry Planner can accept an optional outfit image.

Authentication

Users can register, log in and maintain personalized sessions.

History

Previous recommendations can be reviewed through the history feature.

9. Expected Demonstration Result

At the end of the demonstration, the audience should understand that PocketSmart AI provides a unified platform where users can:

Enter Budget → Provide Preferences → Let AI Analyze → Receive Personalized Recommendations

The project demonstrates the practical use of Generative AI, FastAPI and modern web technologies for everyday budget and planning assistance.
