

Brainstorming and Ideation

PocketSmart AI – Your Smart Budget & Recommendation Assistant

1. Introduction

PocketSmart AI is a Generative AI-powered smart budget and recommendation assistant designed to help users make better purchasing and planning decisions within their specified budget.

The idea was developed by identifying a common problem faced by users while planning expenses for different lifestyle needs such as:

- Home Interior
- Party & Event Planning
- Jewelry Shopping

Users often have difficulty comparing products, services, prices, and platforms while staying within a fixed budget. PocketSmart AI aims to simplify this process by combining budget planning with AI-powered recommendations.

2. Problem Identification

The major problems identified during brainstorming were:

1. Difficulty in managing a fixed budget.
 2. Large number of products and services available online.
 3. Difficulty comparing different price ranges.
 4. Lack of personalized recommendations.
 5. Difficulty finding products according to personal preferences.
 6. Time-consuming manual searching across multiple platforms.
 7. Difficulty planning events while balancing different expenses.
 8. Difficulty selecting jewelry that matches an outfit and occasion.
-

3. Proposed Solution

The proposed solution was to create an AI-based platform that accepts the user's:

- Budget
- Preferences
- Requirements
- Occasion

- Guest count
- Room details
- Optional outfit image

The AI then processes the information and generates personalized recommendations.

The system is designed to provide recommendations across platforms such as Amazon, Flipkart, IKEA, Swiggy, Zomato and OYO.

4. Main Ideas Generated

Home Interior Budget Planner

Users can enter their available budget and specify their room requirements.

The system can recommend:

- Furniture
- Lighting
- Ceiling fans
- Dining tables
- Decorations
- Other interior products

The recommendations focus on balancing price, functionality and style.

Party Budget Planner

Users can provide:

- Total budget
- Number of guests
- Event type
- Venue requirements

The system provides suggestions for:

- Food
- Decoration
- Venue
- Entertainment
- Accommodation

Jewelry Budget Planner

Users can enter:

- Budget
- Occasion
- Style preferences

They can also optionally upload an outfit image.

The AI uses the provided information to generate jewelry recommendations that match the occasion, style and outfit.

5. AI Integration Idea

Gemini 1.5 Flash Pro was selected as the core Generative AI model.

The model is intended to:

- Understand user requirements.
 - Interpret budget constraints.
 - Analyze optional images.
 - Generate personalized recommendations.
 - Provide category-specific suggestions.
-

6. Final Idea

After brainstorming different possibilities, the final concept was defined as:

PocketSmart AI – A smart AI assistant that helps users plan their budget and discover personalized products and services according to their requirements.

The concept combines:

Budget → User Preferences → AI Processing → Recommendations

This idea forms the foundation for the remaining project development phases.
